

7.8 Pharmacy Drug Accountability

Occasionally, commercially available agents not supplied through a study may be deemed “investigational” as part of the [Health Canada](#) No Objection Letter (NOL). Any parenteral agent deemed investigational that is administered in the POGO Satellite Clinic program must have lot numbers and expiration dates recorded and available for review. In addition, the start and end time of parenteral infusion must be documented and available for review as per the protocol requirements. Furthermore, families should be encouraged to fill oral medication prescriptions at the retail pharmacy of the POGO Satellite Clinic community hospital or specialized childhood cancer program tertiary hospital to optimize data collection.

Medication reconciliation must be completed at time of clinical assessment and accurately reflect the current list of medications of the patient. Medication compliance must also be documented.

Disclaimer: Source Accuracy

You are welcome to download and save a local copy of this document in the Word and/or PDF formats provided. As the POGO Satellite Manual is subject to ongoing revisions and updates by POGO, we recommend you regularly check the online version posted at <https://www.pogo.ca/satellite-manual/> to ensure you have the most up-to-date content. In the event of any inconsistency between the content of a local copy and the online version of the POGO Satellite Manual, the content of the online version shall be considered correct.
